

How to Transition to Datto Backupify for Google Apps

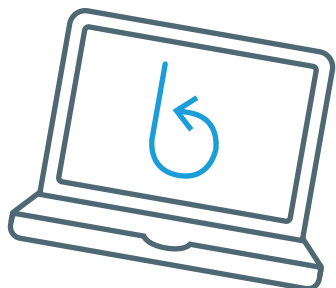

So, you are considering switching from your current cloud-to-cloud backup provider to Datto Backupify. The good news is that it's easy. Your active users will start backing up automatically as soon as you add them to your Datto Backupify account. Also, Datto Backupify allows you to archive users who are no longer active in your Google Apps instance. If you have archived accounts using your current cloud-to-cloud backup provider, you can migrate those accounts to Datto Backupify. If your current provider does not offer this functionality, it is worth considering.

Here's why: maintaining Google accounts for inactive users is expensive, especially for Google Apps Unlimited as you'll see below.

Google Account Type	Pricing
GAAPS for Business (30 GB of data, no Vault)	\$5 per user/month
GAAPS Unlimited (Unlimited storage, with Vault) \$10 per user/month	\$10 per user/month

Datto Backupify Account Type	Pricing
Professional (Unlimited storage)	\$3 per user/month
Enterprise (Unlimited storage)	\$4 per user/month
Enterprise+ (1TB, additional storage \$90/100GB)	\$990 per domain/month

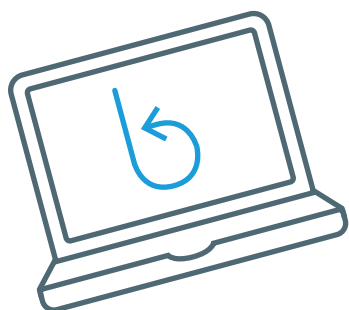

If you are subject to compliance regulations that require you to store employee email records over time, Datto Backupify allows you to do so at a lower cost. Or, if you just need access to an inactive user's documents, you can archive accounts or even restore docs to an active user's Google account.

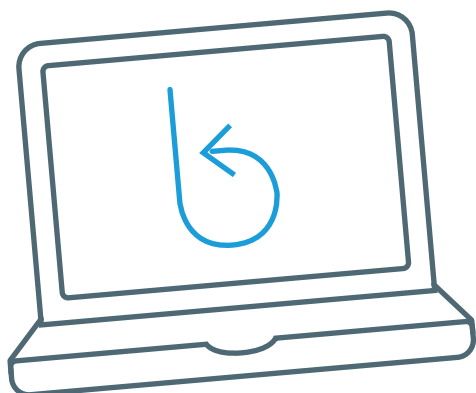

Make the switch

For the archived users you wish to transition from your former solution into Datto Backupify, please follow these simple steps:

1. First, identify free Google Apps licenses on your account for the migration process. We recommend 5-10. You can do this by unassigning licenses from former employees, giving you the ability to re-purpose those licenses temporarily.*
2. In the interface of your former backup solution, add these users.
3. Perform a full service restore** from your archived users in the solution to the new Google Apps user you purchased/freed up in Step 1.
4. Add the Google Apps users from Step 1 to Datto Backupify. Backups will begin to run automatically.
5. Once the backups are complete, delete users on the Google Apps side to free up licenses.
6. Your users will automatically be pushed into the archived state in Datto Backupify, where they will be fully searchable and recoverable for as long as you partner with us.
7. Breathe easy! You now have the best cloud protection available. We want to support you through every step of this process. Feel free to reach out to backupify-support@datto.com to talk through numbers, logistics, and notification options as your archived accounts are migrated into our system.

*If you don't have the recommended amount of Google Apps licenses available, contact backupify-support@datto.com and we will work with you on alternate options.

**Note: If you would prefer, you can export the data from your former solution's archives and import it into the new accounts referenced in Step 1 using a third-party application such as [Thunderbird](#).

About Datto

Datto is an innovative provider of comprehensive backup, recovery, and business continuity solutions used by thousands of managed service providers worldwide. Datto's 190+ PB purpose-built cloud and family of software and hardware devices provide Total Data Protection everywhere business data lives. Whether business data is on-prem in a physical or virtual server, in the cloud, or in SaaS applications, only Datto offers end-to-end recoverability and single-vendor accountability.
